

Package ‘admiralophtha’

June 12, 2026

Type Package

Title ADaM in R Asset Library - Ophthalmology

Version 1.5.0

Description Aids the programming of Clinical Data Standards Interchange Consortium (CDISC) compliant Ophthalmology Analysis Data Model (ADaM) datasets in R. ADaM datasets are a mandatory part of any New Drug or Biologics License Application submitted to the United States Food and Drug Administration (FDA). Analysis derivations are implemented in accordance with the “Analysis Data Model Implementation Guide” (CDISC Analysis Data Model Team, 2021, <https://www.cdisc.org/standards/foundational/adam/adamig-v1-3-release-package>).

admiralophtha_adbcva *Best Corrected Visual Acuity Analysis Dataset*

Description

An example Best Corrected Visual Acuity (BCVA) analysis dataset

Usage

```
admiralophtha_adbcva
```

Format

An object of class `tbl_df` (inherits from `tbl`, `data.frame`) with 7672 rows and 116 columns.

Source

Derived from the OE and ADSL datasets using `{admiral}`, `{admiralophtha}` and the [ADBCVA template](#).

See Also

Other datasets: [admiralophtha_adoe](#), [admiralophtha_advfq](#)

admiralophtha_adoe	<i>Ophthalmology Exam Analysis Dataset</i>
--------------------	--

Description

An example Ophthalmology Exam Analysis dataset

Usage

admiralophtha_adoe

Format

An object of class `tbl_df` (inherits from `tbl`, `data.frame`) with 19136 rows and 103 columns.

Source

Derived from the OE and ADSL datasets using `{admiral}`, `{admiralophtha}` and the [ADOE template](#).

See Also

Other datasets: [admiralophtha_adbcva](#), [admiralophtha_advfq](#)

admiralophtha_advfq	<i>Visual Function Questionnaire Analysis Dataset</i>
---------------------	---

Description

An example Visual Function Questionnaire (VFQ) analysis dataset

Usage

admiralophtha_advfq

Format

An object of class `tbl_df` (inherits from `tbl`, `data.frame`) with 972 rows and 93 columns.

Source

Derived from the ADSL and QS datasets using `{admiral}`, `{admiralophtha}` and the [ADVFAQ template](#). The full, open-source VFQ questionnaire can be accessed [here](#).

See Also

Other datasets: [admiralophtha_adbcva](#), [admiralophtha_adoe](#)

convert_etdrs_to_logmar

ETDRS -> LogMAR conversion

Description

Convert ETDRS score to LogMAR units

Usage

convert_etdrs_to_logmar(value)

Arguments

value object containing ETDRS score to convert to logMAR.

Permitted values a numeric value, e.g. 2, -5, 1.4

Default value none

Details

ETDRS value converted to logMAR as:

$$\log MAR = -0.02 * ETDRS + 1.7$$

Source for conversion formula: Beck, R.W., et al. A computerized method of visual acuity testing. American Journal of Ophthalmology, 135(2), pp.194-205. doi:[https://doi.org/10.1016/s0002-9394\(02\)01825-1](https://doi.org/10.1016/s0002-9394(02)01825-1).

Value

The input value converted converted to logMAR units.

Author(s)

Rachel Linacre

  "XXX001", "P05", "VACSCORE", "ETDRS EYE CHART", 62
)

adbcva <- oe %>%
  filter(OETESTCD == "VACSCORE" & toupper(OEMETHOD) == "ETDRS EYE CHART") %>%
  mutate(OESTRESN = convert_etdrs_to_logmar(OESTRESN))

```

convert_logmar_to_etdrs

LogMAR -> ETDRS conversion

Description

Convert LogMAR score to ETDRS units

Usage

```
convert_logmar_to_etdrs(value)
```

Arguments

value object containing logMAR score to convert to ETDRS.

Permitted values a numeric value, e.g. 2, -5, 1.4

Default value none

Details

logMAR value converted to ETDRS as:

$$ETDRS = -(logMAR - 1.7)/0.02$$

Source for conversion formula: Beck, R.W., et al. A computerized method of visual acuity testing. American Journal of Ophthalmology, 135(2), pp.194-205. doi:[https://doi.org/10.1016/s0002-9394\(02\)01825-1](https://doi.org/10.1016/s0002-9394(02)01825-1).

Value

The input value converted to ETDRS units.

derive_var_afeye

Derive Affected Eye

Description

Derive Affected Eye (AFEYE) in occurrence datasets

Usage

```
derive_var_afeye(dataset, loc_var, lat_var, loc_vals = "EYE")
```

Arguments

dataset	Input dataset.
	Permitted values a dataset, i.e., a data.frame or tibble
	Default value none
loc_var	Location variable, usually XXLOC.

	Permitted values an unquoted symbol, e.g., AVAL
	Default value none
lat_var	Laterality variable, usually XXLAT.
	Permitted values an unquoted symbol, e.g., AVAL
	Default value none
loc_vals	xxLOC values for which AFEYE is derived.
	Permitted values a character vector, e.g. c("EYE", "RETINA")
	Default value "EYE"

Details

Affected Eye is derived in the occurrence dataset using laterality and Study Eye. This assumes Study Eye has already been added from ADSL.

Value

The input occurrence dataset with Affected Eye (AFEYE) added.

Author(s)

Lucy Palmen

derive_var_afeye(adae2, loc_var = AELOC, lat_var = AELAT, loc_vals = c("EYES", "RETINA"))
```

```
derive_var_bcvacritxfl
```

Adds CRITx/CRITxFL pairs to BCVA dataset

Description

[Deprecated] The `derive_var_bcvacritxfl()` function has been deprecated in favor of `admiral::derive_vars_crit_flg` - please see the [criterion flag section of the ADBCVA vignette](#) for more details.

Adds a criterion variables CRITx and their corresponding flags CRITxFL to a dataset containing BCVA records

Usage

```
derive_var_bcvacritxfl(
  dataset,
  crit_var,
  bcva_ranges = NULL,
  bcva_uplims = NULL,
  bcva_lowlims = NULL,
  additional_text = "",
  critxfl_index = NULL
)
```

Arguments

dataset	Input dataset containing BCVA data (usually ADBCVA). Permitted values a dataset, i.e., a <code>data.frame</code> or <code>tibble</code> Default value none
crit_var	Variable with respect to which CRITx/CRITxFL are derived (usually CHG or AVAL). Permitted values an unquoted symbol, e.g., AVAL Default value none
bcva_ranges	List of numeric vectors. For each vector <code>c(a,b)</code> in <code>bcva_ranges</code> , a pair of variables CRITx, CRITxFL is created with the condition: <code>a <= crit_var <= b</code> . If criterion flags of that type are not required, then leave as NULL. Permitted values a list containing one or more numeric vectors, each of length two. E.g. <code>list(c(1, 2), c(3, 4))</code>

	Default value NULL
bcva_uplims	List containing one or more numeric elements. For each element a in bcva_uplims, a pair of variables CRIT _x , CRIT _x FL is created with the condition: crit_var ≤ a. If criterion flags of that type are not required, then leave as NULL. Permitted values a list containing one or more numeric scalars. E.g. list(2, -4) Default value NULL
bcva_lowlims	List containing one or more numeric elements. For each element b in bcva_lowlims, a pair of variables CRIT _x , CRIT _x FL is created with the condition: crit_var ≥ b. If criterion flags of that type are not required, then leave as NULL. Permitted values a list containing one or more numeric scalars. E.g. list(2, -4) Default value NULL
additional_text	string containing additional text to append to CRIT _x . Permitted values a character scalar, i.e., a character vector of length one Default value ""
critxfl_index	positive integer detailing the first value of x to use in CRIT _x FL. If not supplied, the function takes the first available value of x, counting up from x = 1. Permitted values a positive integer, e.g. 2 or 5 Default value NULL

Details

This function works by calling `derive_var_bcvacritxfl()` once for each of the elements in `bcva_ranges`, `bcva_uplims` and `bcva_lowlims`. NOTE: if `crit_var` is equal to NA, then the resulting criterion flag is also marked as NA.

Value

The input BCVA dataset with additional column pairs CRIT_x, CRIT_xFL.

)

```

derive_var_studyeye *Derive Study Eye*

Description

Derive Study Eye (STUDYEYE) in the ADSL dataset

Usage

```
derive_var_studyeye(dataset_adsl, dataset_sc, sctestcd_value = "FOCID")
```

Arguments

`dataset_adsl` ADSL input dataset.
Permitted values a dataset, i.e., a `data.frame` or `tibble`
Default value none

`dataset_sc` SC input dataset.
Permitted values a dataset, i.e., a `data.frame` or `tibble`
Default value none

`sctestcd_value` SCTESTCD value flagging Study Eye selection records.
Permitted values a character scalar, i.e., a character vector of length one
Default value "FOCID"

Details

Study Eye is derived in ADSL using the "Study Eye selection" records in the SC SDTM dataset.

Value

The input ADSL dataset with an additional column named STUDYEYE.
